

MM Beats Limited – Security Incident Report

Incident 001: Social Engineering Attack via Fake HR-Update.cmd File

Incident Details

Incident ID: MM-INC-001

Date: 03 October 2026

Time: 12:51:33 PM

Affected Host: HR-PC01

Affected User: mel

Detection Tool: Wazuh SIEM/Sysmon

Incident Summary

A fake HR update file named **HR-Update.cmd** was downloaded and executed on HR-PC01 by the user **mel**. The file ran Windows commands to identify the logged-in user and computer name. **Sysmon** recorded the activity and **Wazuh** generated alerts for the suspicious command execution.

Detection and Initial Triage

Wazuh generated an alert after Sysmon detected a suspicious command-line activity on **HR-PC01**.

During triage, I reviewed the Wazuh alert and found the following:

Command detected: "**whoami**"

Command detected: "**hostname**"

Parent process: "**cmd.exe**"

Wazuh Rule ID: **92032**

Alert description: **Suspicious Windows cmd shell execution**

Alert Classification: True Positive

Reason: The alert was classified as a true positive because the HR-Update.cmd file executed suspicious commands on HR-PC-01.

File Analysis

File name: **HR-Update.cmd**

SHA-256: 8F8B28B213913565F34CC5DAAE98F0E136628A51BAA5D3D072240924CA17C12D

Original file location: C:\Users\mel\Downloads\HR-Update.cmd

Observed behavior: The file executed **whoami** and **hostname** commands to identify the logged-in user and computer name.

Response and Escalation

The suspicious HR-Update.cmd file was identified on HR-PC01 and containment was recommended to prevent further execution. For this lab simulation, the file was manually moved from the Downloads folder to the SOC-Quarantine folder to demonstrate containment.

The incident was classified as a True Positive. In a real SOC environment, the case would be escalated to a Tier 2 analyst or Incident Response team for further investigation, with the relevant Wazuh and Sysmon evidence attached.
