

MM BEATS LIMITED – SOC INCIDENT TICKET

Ticket ID: SOC-001

Incident: Suspicious HR Update Command File Execution

Status: Escalated– True Positive

Alert Details

Date: 03 October 2026

Alert Time: 12:51:33 PM

Affected Endpoint: HR-PC01

Affected User: mel

SIEM: Wazuh

Detection Source: Sysmon

Alert: Suspicious Windows cmd shell execution

Wazuh Rule ID: 92032

Rule Level: 3

Triage / Investigation

The alert was reviewed in Wazuh to determine what caused the suspicious command shell activity. Sysmon process creation logs showed that HR-Update.cmd was executed from the Downloads folder on HR-PC01 under the user account mel.

Further investigation showed cmd.exe as the parent process and whoami.exe being executed. This activity was not expected for a normal HR update and was treated as suspicious.

Analyst Assessment

The activity was classified as a **True Positive**. The command file was presented as an HR update, but investigation confirmed that it launched command-line activity and executed whoami.exe. This behavior was inconsistent with the expected purpose of an HR update file.

Action Taken / Containment

The suspicious HR-Update.cmd file was identified on HR-PC01. Based on the investigation, containment was recommended to prevent further execution of the file. For this lab simulation, the file was manually moved to the SOC-Quarantine folder to demonstrate the containment process.

Escalation

The alert was classified as a **True Positive** and would be escalated to a Tier 2 analyst or Incident Response team for further investigation. Relevant Wazuh and Sysmon evidence would be attached to the case to support the escalation.
